PLANET ASSOCIATES RELEASES NEXT VERSION OF PLANET® IRM CRITICAL INFRASTRUCTURE MANAGEMENT SOFTWARE

New Feature Set Simplifies Operations and Enhances User Experience in Documenting and Managing Total Enterprise Infrastructure

Neptune, NJ – March 2, 2007– Planet Associates Inc., the leading provider of Infrastructure Relationship Management (IRM) software and services for Enterprise Networks, has released Planet IRM v7.50, the next major version of its comprehensive visualized Configuration Management Database (CMDB).

Advanced features in release v7.50 include:

Element Replacement:
- Equipment, Locations and Cables can be replaced within a work site and retain existing physical and virtual connectivity
- Replacement rack elements are automatically verified to meet dimensional and operational restraints
- Old equipment and cables can be flagged as obsolete to prevent users from creating new systems containing legacy elements

Placement, copy and move functions:
- Existing systems in selected areas or entire sites (including contained cabling) can be easily duplicated or relocated
- Visual assistance is provided for placing elements in desired configurations

Various data display enhancements such as tool tips and text manipulation have also been incorporated in an effort to heighten the overall user experience and increase ease of use.

Planet IRM is designed to consolidate critical infrastructure information and streamline IT operations through a single, centralized, visual data repository, which improves operational efficiency and service levels, reduces network disruptions and downtime, and provides the cohesion necessary for accurate and thorough critical system analysis.

About Planet Associates Inc.
